What about ice generators ?

The GEA Geneglance policy aims at improving its technology and the reliability of its equipment for the satisfaction of the world users, we are bringing improvements to our flake models with accents made on performance & efficiency, hygiene and durability while preserving competitive prices.

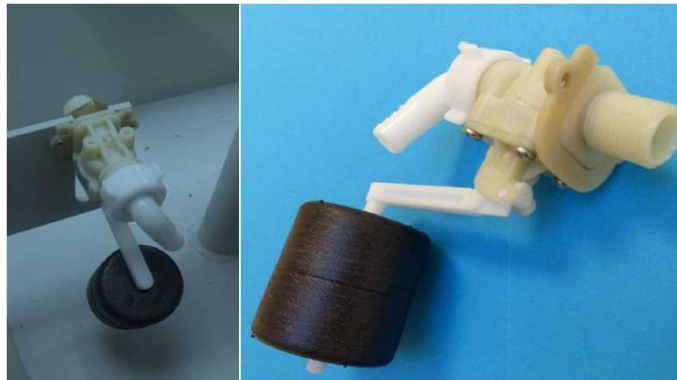

New water supply float valve GEA-AkM

From february 2014, a new water supply float valve has been introduced on all our generators. All new ordered flakers are now equiped with GEA-AkM float model. This new design is introduced because it's participate to the general improvement of our machines and their constituents. The installation procedure is also much more easy essentially due to the lower dimension of this float.

For service and maintenance, we have available kits that's ensure the replacement of old models on existing machines, these kits are adapted to all models from F15 to F2000 as well as fro on board models.

Old models

New GEA -AkM models

One installation and setting manual have been printed to be delivered with the float when delivered as spare part or with new ice generators.
